Western Rolls Out Greens-Grade “Pozz”.

Reno, NV (December 10, 2007) Western Pozzolan, manufacturers of Lassenite ATS Soil Amendments, are pleased to announce that it now offers a Pozzolan sized to meet USGA requirements. As with all grades of Lassenite, the new finer mesh will help to reduce compaction and localized dry spots while maintaining its unique ability to release stored water. For use in golf course greens and sportsfields that specify USGA sand, the addition of Lassenite will provide enhanced drainage and promote healthy, stable root systems.

Lassenite Pozzolan is available in a variety of sizes depending upon application and soil type. Contact Steve Beck, <http://www.westernpozzolan.com> or info@westernpozzolancorp.com
